AutoCAD has been called the world's most popular CAD program for designing, drawing, and modeling. It's also the most popular 2D drafting program. In 2013, it was ranked as the top CAD software application in the world by Gartner. AutoCAD History In the 1980s, two organizations developed and marketed different types of CAD software: The user-interface programs sold by Xerox, developed by DFG in Dornburg, Germany, and called International Business Machines (IBM) Graphix The DFG-IBM CAD program that was sold by DFG. In 1984, DFG and IBM started to develop a new program called "AutoCAD". The initial development was performed by DFG and IBM. They then handed the program over to Autodesk to finish and to distribute the final product. Autodesk initially marketed Autodesk CAD as a professional design program. However, the market and customer needs changed, and Autodesk began to market Autodesk CAD as a more flexible and user-friendly entry-level drafting program. AutoCAD has many specialized drawing tools and features: AutoCAD R14 (2013) has more than 10,000 commands and can be used to design, create, modify, and analyze technical drawings. It includes a robust toolbox, an intelligent feature-based help system, advanced import/export capabilities, and connectivity with other programs.
