Q: How to get only defined methods in Gson? With the current version of Gson it's impossible to deserialize a json object with a specific class. Gson gson = new Gson(); Classy class = gson.fromJson(json, Classy.class); A class that "inherits" from another class and overrides its methods won't work. Class y extends Class z { @Override void method(); } When I try to load a json object with such a class it throws an exception. Exception in thread "main" java.lang.IllegalStateException: Expected a class, but got a { Is there a workaround to this problem? A: Gson usually uses reflection to generate java code for deserialization. It uses the well-known java reflection API (java.lang.reflect) to access to the package private method named "fromJson()". That "well-known" java reflection API doesn't allow to add new methods to the class, to the package, or even to the super class. In your case, you can use GsonBuilder's merge method to generate a "new" deserialization method for you, that will call the default deserialization (according to your comments) and also the rest of your new method. Simple example: public class MyClass { public MyClass (String param1, String param2) { System.out.println ("MyClass()"); } public String method1 (String param1, String param2) { System.out.println ("method1()"); return "result"; } public String method2 (String param1, String param2) { System.out.println ("method2()"); return "result2"; } public void main (String [] args) { GsonBuilder gsonBuilder = new GsonBuilder(); gsonBuilder.merge(); // use "default" deserialization gsonBuilder.create().fromJson("{\"param1\":\"value1\",\"param2\":\"value2\""},

What's New in the Photoshop 7.1 Free Download For Android?

2015 was a big year for awareness of the all-new Kia Soul. At the time, it was our most expensive Soul model yet, with that added to the already attractive pricing, we thought it was well worth the dough. It was all good news for 2016, when it was revealed as the only Kia with a petrol engine option, having topped our list of most exciting products of 2015. Now it's back, with an even higher base price (currently £25,000, but that will rise to over £28,000) and even a more petrol-friendly 1.6-litre engine option. Although there are still petrol and diesel options, our test car is the best-spec'd petrol Soul. Inside is a mixture of simplicity and practicality, with few unnecessary bells and whistles, and a smooth, simple dashboard that's easy to read. The touchscreen infotainment display is simple to use, even though the screen has a low resolution and the menus are, at best, English only. Although the logo-bedecked plastic is a bit cheap-feeling, there is a soft-touch finish with a decent amount of grip – we didn't have any issues with the steering column or all the controls and buttons. Again, we can't really comment on how well the touchscreen works in the dark because it's impossible to test, but we can confirm that there's enough room inside for three adults, even in the back. The SE-Pac had an exceptionally large boot for three adults and three children, with over 50 cubic feet and so much space that the boot divider is a job-stealer. The new 1.6-litre petrol engine has a new variable valve timing, which allows it to make more power for more of the time. There are still upgrades, too, for the exhausts and suspension and springs, giving a smoother ride. As is still the case, it makes decent progress with just the accelerator pedal, with the engine pulling smoothly and pulling up to speed easily. It will take you about a second to get up to speed, with the engine pulling smoothly and effortlessly with a rhythmic roar. The six-speed automatic transmission is the best in the business, providing instant and smooth gear changes, and without any jerky motions or significant noises. The engine is well liked, too, and it will happily keep on going even on the motor
