(English - Español - 中文 - 日本語 - Deutsch - Português - Français - Ελληνικά) Download the installation media for the Epson Stylus TX129. Allergic conjunctivitis with tear transfer factor to Streptococcus gordonii and cholera toxin. We report a rare case of atopy (allergic conjunctivitis) in a 16-year-old girl, who experienced itching and redness of the eyes during hot summer and a few weeks later developed similar symptoms after eating cereals. The patient had positive skin prick tests with cat and milk allergen and positive RAST for cat and milk allergens. Histopathologic examination of the conjunctival mucosa indicated eosinophilic infiltration with marked edema, exocytosis, lymphocytic infiltration and decreased mucin secretion. Immunohistochemically, the infiltrating cells were positive for a T-cell marker (CD3) and an eosinophil marker (EG2). Furthermore, most of the infiltrating cells coexpressed IgE, indicating that these cells were activated. In addition, IgE-positive cells were stained with peanut and milk allergen, indicating that these cells were sensitized with peanut and milk antigens. To demonstrate antigen-induced secretion of IgE, a conjunctival transfer factor (CTF) assay was performed. The concentration of IgE was significantly increased during the attack. The patient's tears and cultured tear fluid were collected simultaneously, as well as control tears from the conjunctiva of a healthy person. Both collected tears and cultured tear fluid showed increased IgE levels. Using a reversed passive hemag
