What's new in LASTFIGHT:

s (2012) If ever an add-on from China was a good idea for a mod in Superfreak Train Simulator, then the DB BR 146.5 diesel loco

and the BR 668 petrol loco is our excuse. Does anyone remember the good old days before Freeside? Back then I used to allow pop ups for all of these very odd looking locos, then click them away if they weren't wanted. But of course that blew up with fans of Freeside's locos and whether they are in the "good" Real Time Mode, or the "best" custom-built and modded mode... It was getting a bit out of hand. And besides the pop ups no longer worked for most or any of the locos. So I locked my sites down, started using a login system to prevent pop-ups etc and has carried on doing so ever since, which is why I keep some of my locos locked down. But the "Intercity 2" Chinese locos are too darned cute, even in "proper" Superfreak Train Simulator, and as such we are unlocking them all up again for a few months in 2014. But the deadline for the locos in Freeside is going to be earlier than some of those being unlocked, so what you get from me I hope will be available for those which I fail to release in time. The layout is getting closer to a release, as it is for the loco's themselves... although they are now finished, I may botch up the voice. Last week it was "1st" then "2nd" and then..... "3rd". As you have no way of telling if a loco is "the loco" for a task or not, I had thought, well if this loco is third, then the other two must be "1" and "2". So I've started to re-name them so that I can avoid making that mistake next time. But they are that hard to type it seems to me

that it is easier to start again... Too much of my time is wasted out typing stupid "names" Theloco names are actually in the correct order and is not "3rd" then "2nd".
