You can insert the tape cartridge to the piano keyboard and then start playing. When the MIDI keyboard was first introduced in the 1980s, each instrument had its own DAW program. The MIDI keyboard is a small, plastic box that plugs into a PC's sound card. Your computer should be set to MIDI mode. You can use the keyboard to play sounds on your computer, for example, to compose a musical piece. The great thing about the keyboard is that it allows you to control the sounds of all your MIDI instrument controllers at the same time. To edit a Note, you use a mouse. The Music keyboard has some advantages over other keyboards. It has many more keys, which is very useful for piano performance. This keyboard can also be used with any MIDI sound that you record on your computer. This lets you record any sound from your computer.
