Sometimes, Photoshop can create a rainbow effect in an image. Here, my image is too large, and it has created a too much rainbow effect in it. So, I am resizing the image. Now, when you resize an image, there can be some loss of quality, so you will have to choose your file carefully. If you use a too large file, the rainbow effect will be too large, and you will not be able to control the color. So, when you resize the blue color, the bigger its image, the more colors it will have. Here, you can see that, without reducing the size, the image has too much color. From there, you can choose from a variety of basic or artistic styles. Some styles share the same underlying settings, but others provide more unique options. You can edit styles even if you're not in Expert mode, or bring the styles you've created to other files. Use Layer Masks to analyze individual layers in a particular image. Descriptive layer names make it easy to manipulate individual layers without thinking about the image as a whole. The Channels panel shows you how various areas of one layer sum up to a whole. Transparency in image layers, such as cutaway parts of a model, is shown relatively easily in the Transparency panel. The Mask panel is for people used to working with masks by eye rather than with tools. It turns on the visibility of the upper-left part of the layer and makes these parts draggable; you can move them, resize and reposition them, and even blend them in to another photo.
