Erlang Calculator Crack [Win/Mac]

If you are a civil engineer, a traffic engineer or a telecommunications engineer, Erlang Calculator is the right program for you. If you work for a software company, you can use it as a system-wide calculator for estimating trunk traffic volume and line number. In addition, you can even use it for debugging VoIP traffic that you need to send over the network. Erlang Calculator enables you to estimate the number of servers you will need in order to provide the requested traffic. In addition, you can estimate the number of lines you

need in order to keep your call center active during busy hours. You can also quickly and easily calculate the number of lines and operators needed in order to cover all calls in a given time period. This is a very handy and quick program that allows you to calculate all this information in a matter of seconds. It does not require a lot of time to get started, and you can easily adjust the parameters based on your specific needs. Erlang Calculator does not use any licenses from other companies, and it does not leave any files in your registry. This

simple-to-use application is quite friendly and will appeal to a wide audience, including students, teachers, scientists, engineers, IT professionals and anybody else who needs to estimate the number of lines and users you need in order to accomplish a specific project.

User interface Erlang Calculator does not impress much in the visual department as it sports a plain GUI. However, the multi-tabbed layout makes it quite practical because you can easily switch between the key features of the program, such as Erlang B, Extended Erlang B and Erlang C calculator. Working with the calculators The Erlang B calculator

can be used by telephone system designers in order to calculate the number of lines you need based on the busy hour traffic. The Extended Erlang B calculator comes with several tweaking parameters that allow you to calculate the probability of blocking, lines (number of servers), and traffic data. Last but not least, Erlang C gives you the possibility to calculate the number of agents that are needed in a call center based on several configuration parameters, such as quantity and length of the incoming calls. Bottom line All

things considered, Erlang Calculator comes with a handy suite of configuration settings for helping you perform several calculations related to the traffic in a call center. On the downside, the GUI cannot be described as highly intuitive, so rookies may need extra time in order to decode the program's features. Erlang Calculator Review- Is It Scam or Legit?
