-- klotures 2022 Crack is an open-source app dedicated to lending a hand with better desktop organization. While most people try to keep their desktop clutter-free, sometimes they need to sacrifice the tidiness to performance and this can lead to an overwhelming desktop in no time. The utility includes a toggle function that enables users to quickly hide and show all of the windows created, which may be considered a balance between a clean desktop and efficiency in accessing quick links and shortcuts. The program addresses users who need to have shortcuts on their desktop readily available, but would like to add some sort of organization so they maintain efficiency and focus. The idea behind the tool is to create small clusters of icons from the shortcuts used regularly within transparent windows. The app is portable and does not need complicated installation or configuration. There is no limit to the number of windows that can be created and all of them can be easily locked and unlocked with a click of a button. The locking feature can come in handy in most situations since there is always a chance of miss clicking and removing important shortcuts. At the same time, the windows can be renamed, moved and resized according to individual needs and preferences. That's exactly why I've been telling you to ignore the text that comes up when you launch the app and go straight to the tool buttons. There you have the option to toggle on/off the show/hide thing. That way you can just show the icons of shortcuts and it won't bother you anymore. @Tommykmo, you said that "but still somehow everyone has those ad clutter on their desktop." I've tried almost every button in the menu bar (and the buttons in the toolbar), but I'm not seeing the option to toggle show/hide. @akrepy I understand your point, but what do you think the benefit is of showing every shortcut you have? If I click on that option, I still have to click on every shortcut to access the one I want. It's only useful to show the shortcuts
